Thrissur, Kerala, India

PROFILE

Dynamic Technical Product Manager and Full-Stack Engineer with over 5 years of experience in product ownership, agile delivery, and architecting enterprise-grade applications using cloud-native technologies. Proven expertise in leading agile product delivery, managing backlogs, mentoring cross-functional squads, and driving engineering excellence. Adept at modernizing legacy platforms through Next.js, microfrontends, and multi-tenant authentication systems. Highly skilled in React, TypeScript, NestJS, FastAPI, Django, and AWS. Holds a **Chancenkarte** enabling immediate work authorization in Germany without employer visa sponsorship.

KEY IMPACT METRICS

80%	50%	5+ Years	0→1	3×
Faster document processing	Reduction in ops cost	PM + Engineering experience	AI products shipped	Roles: PM + Dev + Squad Lead

WORK EXPERIENCE

Technical Product Manager

Alphastream.ai, India · March 2025 – Present

- Proposed and led **Document Intelligence** — unified AI product for document upload, taxonomy creation, clause extraction, and prompt-based optimization; delivered **80% faster processing** and **50% cost reduction**.
- Defined and shipped **IC Memo & IDR Memo MVP**: template-driven LLM workflow generating PowerPoint-ready investment memos from uploaded source documents.
- Acting Product Owner for **Termgrid** (private credit deal negotiation) and ARES client — owned delivery from requirement intake through release.
- Defined **Loan Document Processing** workflows for credit agreements, term sheets, and commitment letters.
- Led cross-functional squad (frontend, backend, QA) — sprint planning, estimation, acceptance validation, release readiness.

Member of Technical Staff (II)

Alphastream.ai, India · January 2024 – February 2025

- Led migration from monolithic frontend to **microfrontends** (single-spa, module federation) enabling independent team deployment.
- Migrated legacy platform to **Next.js** — improved performance, Core Web Vitals, and maintainability.
- Built multi-tenant authentication with **Okta and Azure AD** — new clients onboard via config, zero code changes.
- Built event-driven search: **DynamoDB Streams** → **AWS Lambda** → **OpenSearch** for near real-time contract compliance.
- Provisioned production AWS infra via CDK: VPC, ECS Fargate, API Gateway, Cognito, CloudWatch.

Member of Technical Staff (I)

Alphastream.ai, India · July 2022 – December 2023

- Built **React/TypeScript applications** for financial analysts — document annotation, clause extraction, legal document comparison.
- Designed **calculation & validation framework**: interest schedules, covenant checks, dynamic formula evaluation.
- Built real-time ESG and financial dashboards powered by **Django REST APIs**.
- Implemented secure RBAC REST APIs with **OpenSearch/Elasticsearch** for structured search and audit history.

Software Engineer

Tata Consultancy Services, India — Client: H&M; · January 2021 – July 2022

- Maintained and scaled H&M tag design system across product lines.
- Optimized MSSQL queries and stored procedures, cutting execution times significantly.
- Delivered data pipelines using **Azure Data Factory and SQL**.

KEY CASE STUDIES

Document Intelligence Platform

AI Product · TPM Role · 80% faster processing achieved

Problem Analysts manually reviewed hundreds of financial document pages with no standardized process, causing inconsistencies and slow turnaround.	What I Did Proposed and led product from 0→1. Evaluated vision models and prompt-based extraction techniques. Managed cross-functional backlog and ran iterative client demos.	Outcome 80% faster document processing and 50% reduction in operational costs. Analyst time-per-document reduced from hours to minutes.
--	--	---

Termgrid — Private Credit Deal Negotiation

Fintech Platform · Product Owner · 0→1 product shipped

Problem Private credit negotiations happened via email chains — no structured platform for negotiation, version tracking, or workflow management.	What I Did Captured requirements, wrote user stories, managed backlog, prioritized phased MVPs, and led sprint delivery across frontend, backend, and QA.	Outcome Delivered working negotiation platform from requirements through release, reducing deal cycle time and manual documentation overhead.
---	---	---

Monolith to Microfrontend Migration

Architecture · Engineering Lead · ~3× release speed improvement

Problem Monolithic frontend was a deployment bottleneck requiring full team coordination per release, with duplicated shared code.	What I Did Led migration to microfrontends using single-spa and module federation, concurrently migrating to Next.js, in phased approach to avoid disrupting live clients.	Outcome Teams now deploy independently. Shared libraries eliminated duplication. Core Web Vitals improved significantly. Release cycle ~3× faster.
